REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Per claims 4, 12, and 18, while it is known in the art to provide a method of treating wastewater including at least two tanks with a dual-use recirculation pump receiving mixed liquor from each tank and returning the mixed liquor to a jet located above the tanks, wherein mixed liquor from the two tanks may be recycled (see, for example, US Pat No 4,767,537 to Davis), and it is known in the art to provide a deep tank with a dual-use pump withdrawing mixed liquor from the deep tank and returning the water to a sparger located within the tank and wherein a clarifier is connected to the deep tank (see, for example, US Pat No 3,772,187 to Othmer), in the examiner's opinion, the prior art fails to teach or fairly suggest combining the prior art such that at least 100% of the input rate from a downstream tank is returned to a jet manifold disposed within an upstream tank placed in series with a downstream tank, wherein each tank is a deep tank and mixed liquor is withdrawn and fed to the upstream tank in the recited manner. Further, it is noted that Othmer would appear to teach away from using a jet mixer within the single deep tank of Othmer as Othmer discloses that turbulence within the tank should be avoided and Davis would appear to teach away from placing the parallel tanks of Davis in series as the tanks of Davis must be in parallel in order to simultaneously receive feed. The instant invention provides the advantage of increasing mixing efficiency and providing a high nitrate recycle rate while avoiding the use of multiple pumps and mechanical connections.
